The Impact of technology has in education and commodity market today is quite significant as technology in education and commodity market has the power to transform how the people learn. Technology has a great impact on every aspect of day to day life and education being the most important part of human life. It means education and commodity market also not left from its influence. Technology the more productive he is to the commodity trading. the development in Technology has a major impact on various aspects of education and commodity trading. the Rapid change and development in technology are changing teaching process the earlier version of chalk and Duster has been replaced with classroom equipped with laptop, computer, and mobile. they have replaced Boards, chalk as the go to tool in classroom today.

Keywords:- Technology, Development, Commodity trading

Introduction

Crescent accomplishment of Technology have provided commodity trading and Modern Education with competitive boon. What matters most is how commodity trading and education are used this technology to maximize their benefit and ensure long-term success in the field. whenever we have added to any new technology some values are added and some values are reduced. every part of education organization is going to reshape by mobile and Computer. technology will be integrated into every part. However, there are benefits as we may assume that using social networking as part of the learning process can help pupils in many ways.

Research Methodology

To complete research work, secondary sources for data collection are used journals, reports published in different magazines and newspapers also used for data collection

Hypothesis:-

The research work proceeded on the base of hypothesis, some hypothesis are;

- modern technology basically computer and internet base work mostly used in educational and commodity trading as well.
- Old system of education and commodity trading is bruised without modern technology. most of the trade and professional are using new communication system like computer, laptop, internet and smartphone.

Objectives

To know the use of new technology in education and commodity trading.

To know the development of educational system.

To find out the difficulties of Technology using in Educational Institute and commodity trading business.

To suggest the measures to remove problems and difficulties of Technology in education and commodity trade.

Impact Of Technology On Education System In India

Education is main key of modification of behavior the quality intensification is the vital factor in the field of education. Innovation can play a role to improve qualitative Intensification if the education.the quality of any education system is directly have a connection with the new innovation and practice in the field of education.Technology to increase the axis of education has been very effectual worldwide as in many foreign countries we find paperless classroom.where teachers are just middleman of the classification that are working on a particular theme. educational technology is that dynamic progressive and important mechanism if the field of education.which modifies and analyses the various steps of teaching and learning with the help of indoctrinated principles.

Type of educational technology

lumsdane suggest that educational technology has the following three from-

Hardware approach

Software approach

System analysis

Scope of Technology Education In India

Educational is the backbone of a nation.technology in education system used all types of modern media and materials for maximizing the learning experience. Education technology is recommended by exports as one of the potential means of disable education effectively and efficiently. Digital technology education is gaining a lot of Popularity with the increasing demand of education and wide expand use of NET with enlargement of Technology is there is a large potential of technology to be integrated with educational system.It's Win-Win solution for all.

Technology Education Are Challenges

The technology education is a leadership program under “The technology digital India programme” of the Government of India with a vision to transform of India into a digitally privilege society and knowledge economic some of the challenges are-

- poor maintenance and upgrading of digital equipment
- insufficient fund
- resources and internet connectivity challenges
- language and content related challenges
- shortage of trained teachers

Impact Of Technology On Commodity Trading

Technology is the most important in commodity trading.there are two kinds of Technology

(1) Technology that can dazzle the undisclosed price of the commodity.

(2) Inventive digital technology that can change the way commodities traded.

A digital technology become more powerful they will continue to transform commodity trading values chain before, during and after a trade

- Securitization.
- position generation.
- Execution.
- Investment decision.
- portfolio management.
- after the trade.
- management to big data.
- Artificial Intelligence and automation.
- More cloud option.
- Blockchain.

Commodity trading is largely a future game and some of the largest players in the market companies such as large Agri Business that are hedging. Possible bad weather or other factor that might affect crops but this is a multiplex are. whereas Oil Companies are buying farmland as a hedge against the possible discovery of biofuels energy and other companies are constantly looking ahead when managing their on commodity portfolio. Before last year a new task was expansion. which use a simple chemical to recover the gold used in mobiles and with roughly 300 tons of gold going into electronic each year. This is a critical development with two main impacts first the price of second hand mobile is likely to rise and secondly their may be and impact on the gold price as less new gold in needed by industry.

Conclusion

Modern technology is very affected to educational system and commodity market. Computer internet in Smartphone made easy and smooth functions of educational commodity trading. The use of Technology instruments in increasing order. The benefit of Technical system is getting popularity in each part of education and Community Market in India
